Structure
SoLutions 

Following on from the success of the Med Viva and Med Elite we are pleased to be able to bring you the Med Room.

The Med Room features a deep aluminium structure which can be free-standing or mounted onto your building.

The roofs on these structures fully retract to one side using either the Maki (roof rolls up) or Plana (roof hangs in folds) roof systems.

Due to the depth of the side profiles, the roof can't be seen.

The roof is electrically operated using a hand-held or wall-mounted remote control.

- Maki roof version available up to 7m long & 5m wide or 10m long & 5m wide with 2 roofs.
- Plana roof version available up to 7m long & 5m wide or 10m long & 5m wide with 2 roofs.
- Plana roof version can have 2 structures linked to give an overall size of 7m long & 10m wide.
- The aluminium structure is powder coated in standard and optional RAL colours. Stainless steel fastenings used.
- Roof drains into built-in side gutter which drains down one or more of the legs.

Operation

Maki - multiple counter-rotating rollers retract cloth back to one side. A single electric motor housed within the framework operates all rollers in each roof via remote control handset or wall mounted rocker switch.

Plana - roof retracts electrically via remote control or wall-mounted rocker switch, to one side where the fabric hangs in folds against the frame.

Specification

- Med room with aluminium framework with electrically operated retractable fabric roof.
- Maximum single module:
Projection 7m x Width 5m.
- Maximum double module (Plana only):
Projection 7m x Width 10m.
- Roof is angled within framework and manages rainwater into integral gutter even when being retracted.
- Dimensions:
Maki: Legs 150 x 150mm. Frame 430mm high
Plana: Legs 150 x 150mm. Frame 540mm high
- Roof offers full rain and UV protection when closed.

Options

- Stack protection for retracted roof.
- Choice of roof fabric types and colours.
- Lighting:
LED spot-lights fitted to bars (Plana only).
RAYA lighting bars fitted to inside of frame.
- Retractable roller side walls with choice of fabrics.
- Glass sliding doors and walls.
- Handset or wall mounted controls.
