Quantock

Polycarbonate Roof Walkways

Outside Structure Solutions

The Quantock is an aluminium-framed walkway canopy with a polycarbonate roof system.
The roof can be arched or flat with a choice of polycarbonate - solid or multi-wall as well as a choice of thicknesses and tints.
The walkways provide a link between buildings and make ideal shelters from bad weather.
Individual canopies can be used as smoking shelters, bike or trolley storage, bus shelters as well as waiting areas.

- Available in barrel arch or mono-pitch design.
- Maximum width (projection) 5.5m (rear height dependent) Maximum length unlimited.
- Aluminium frame for longevity and maintenance-free usage. All aluminium parts are powder-coated.
- Non-fragile polycarbonate panels available in Clear, Opal or Bronze tints offering full UV protection.
- Side, rear and end flashing details available for sealing the Quantock walkway to the building.

Roof Panels

Multi-wall non-fragile polycarbonate roof sheets are held within an aluminium framework for increased strength and ease of installation. Each panel links to the next to produce a strong but light roof system.
Solid polycarbonate held within bar system to enable installation of curved roof shapes.
The roof panels have been tested to the Health and Safety Executive recommended drop test for roof assemblies. This design achieves a Class B designation.

Specification

- Available in projections up to 5.5m and unlimited length.
- Structures can be Free-Standing with legs front and rear or Lean-to with front legs, mounted to building at rear.
- Polycarbonate roofing material available in a choice of Clear, Opal or Bronze tints.
- Aluminium frame powder-coated to choice of 9 standard colours.
